## JDK 1.1 to J2SE 1.4

- JDK 1.1 (1997): AWT event model, inner classes, Java Database Connectivity (JDBC)
- J2SE 1.2 (1998): Swing, Collections
- J2SE 1.4 (2002): assert keyword, regular expressions, exception chaining, non-blocking IO (NIO)

Department of Computer Science | UNIVERSI https://www.cs.usfca.edu/ | SAN FRAN

Module java.base Package java.util

#### **Class Collections**

java.lang.Object java.util.Collections

public class Collections
extends Object

This class consists exclusively of static methods that operate on or return collections. It contains polymorphic algorithms that operate on collections, "wrappers", which return a new collection backed by a specified collection, and a few other odds and ends.

The methods of this class all throw a NullPointerException if the collections or class objects provided to them are null.

The documentation for the polymorphic algorithms contained in this class generally includes a brief description of the *implementation*. Such descriptions should be regarded as *implementation notes*, rather than parts of the *specification*. Implementors should feel free to substitute other algorithms, so long as the specification itself is adhered to. (For example, the algorithm used by sort does not have to be a mergesort, but it does have to be *stable*.)

The "destructive" algorithms contained in this class, that is, the algorithms that modify the collection on which they operate, are specified to throw UnsupportedOperationException if the collection does not support the appropriate mutation primitive(s), such as the set method. These algorithms may, but are not required to, throw this exception if an invocation would have no effect on the collection. For example, invoking the sort method on an unmodifiable list that is already sorted may or may not throw UnsupportedOperationException.

This class is a member of the Java Collections Framework.

Since:

1.2

## J2SE 5.0 to Java SE 7 (1.7)

- J2SE 5.0 (2004): Generics, annotations, autoboxing/ unboxing, enumerations, enhanced for each loops, concurrency enhancements
- Java SE 6 (2006): Performance improvements
- Java SE 7 (2011): Try-with-resources, catching multiple exception types, new file IO

#### Interface Iterable<T>

#### Type Parameters:

T - the type of elements returned by the iterator

#### All Known Subinterfaces:

BeanContext, BeanContextServices, BlockingDegue<E>, BlockingQueue<E>, Collection<E>, Degue<E>, DirectoryStream<T>, EventSet, List<E>, NavigableSet<E>, NodeSetData<T>, Path, Queue<E>, SecureDirectoryStream<T>, Set<E>, SortedSet<E>, TransferQueue<E>, XPathNodes

#### All Known Implementing Classes:

AbstractCollection, AbstractList, AbstractQueue, AbstractSeguentialList, AbstractSet, ArrayBlockingQueue, ArrayDegue, ArrayList, AttributeList, BatchUpdateException, BeanContextServicesSupport, BeanContextSupport, ConcurrentHashMap.KeySetView, ConcurrentLinkedDeque, ConcurrentLinkedQueue, ConcurrentSkipListSet, CopyOnWriteArrayList, CopyOnWriteArraySet, DataTruncation, DelayQueue, DocTreePath, EnumSet, HashSet, JobStateReasons, LinkedBlockingDeque, LinkedBlockingQueue, LinkedHashSet, LinkedList, LinkedTransferQueue, PriorityBlockingQueue, PriorityQueue, RoleList, RoleUnresolvedList, RowSetWarning, SerialException, ServiceLoader, SQLClientInfoException, SQLDataException, SQLException, SQLFeatureNotSupportedException, SQLIntegrityConstraintViolationException, SQLInvalidAuthorizationSpecException, SQLNonTransientConnectionException, SQLNonTransientException, SQLRecoverableException, SQLSyntaxErrorException, SQLTimeoutException, SQLTransactionRollbackException, SQLTransientConnectionException, SQLTransientException, SQLWarning, Stack, SyncFactoryException, SynchronousQueue, SyncProviderException, TreePath, TreeSet, Vector

#### public interface Iterable<T>

Implementing this interface allows an object to be the target of the enhanced for statement (sometimes called the "for-each loop" statement).

#### See Java Language Specification:

14.14.2 The enhanced for statement<sup>™</sup>

Since:

1.5

### https://www.cs.usfca.edu/~cs272/javadoc/api/java.base/java/lang/Iterable.html

Module java.base Package java.nio.file

#### **Class Files**

java.lang.Object java.nio.file.Files

public final class Files extends Object

This class consists exclusively of static methods that operate on files, directories, or other types of files.

In most cases, the methods defined here will delegate to the associated file system provider to perform the file operations.

Since:

1.7

### https://www.cs.usfca.edu/~cs272/javadoc/api/java.base/java/nio/file/Files.html

JDK 1.0 (1st stable: v1.0.2)

	J2SE 1.4					
	J2SE 5.0 (1.5)					
		Java SE 6 (1.6)				
			Java SE 7 (1.7)			
				Java SE 8 (1.8)		
				Java SE 9 (9.0) Java SE 10 (	(10.0)	
				Java SE 11		
				Java SE 12	Java SE 16	
					Java SE 17	
20	00	20	10	2020		

CS 272 Software Development Professor Sophie Engle

### Java SE 8 to 11

- Java SE 8 (2014): Lambda expressions, streams
- Java SE 9 (2017): Modularization, jshell
- Java SE 10 (2018): var keyword
- Java SE 11 (2018): Added java.net.http

#### Annotation Type FunctionalInterface

@Documented @Retention(RUNTIME) @Target(TYPE) public @interface FunctionalInterface

An informative annotation type used to indicate that an interface type declaration is intended to be a functional interface as defined by the Java Language Specification. Conceptually, a functional interface has exactly one abstract method. Since default methods have an implementation, they are not abstract. If an interface declares an abstract method overriding one of the public methods of java.lang.Object, that also does not count toward the interface's abstract method count since any implementation of the interface will have an implementation from java.lang.Object or elsewhere.

Note that instances of functional interfaces can be created with lambda expressions, method references, or constructor references.

If a type is annotated with this annotation type, compilers are required to generate an error message unless:

- The type is an interface type and not an annotation type, enum, or class.
- The annotated type satisfies the requirements of a functional interface.

However, the compiler will treat any interface meeting the definition of a functional interface as a functional interface regardless of whether or not a FunctionalInterface annotation is present on the interface declaration.

See Java Language Specification: 4.3.2 The Class Object<sup>™</sup> 9.8 Functional Interfaces<sup>™</sup> 9.4.3 Interface Method Body<sup>™</sup> 9.6.4.9 @FunctionalInterface<sup>™</sup>

#### Since:

1.8

### https://www.cs.usfca.edu/~cs272/javadoc/api/java.base/java/lang/FunctionalInterface.html

#### 14.4.1. Local Variable Declarators and Types

Each *declarator* in a local variable declaration declares one local variable, whose name is the *Identifier* that appears in the declarator.

If the optional keyword final appears at the start of the declaration, the variable being declared is a final variable (§4.12.4).

The declared type of a local variable is determined as follows:

- If LocalVariableType is an UnannType, and no bracket pairs appear in UnannType or VariableDeclaratorId, then UnannType denotes the type of the local variable.
- If LocalVariableType is an UnannType, and bracket pairs appear in UnannType or VariableDeclaratorId, then the type of the local variable is specified by \$10.2.
- If LocalVariableType is var, then let T be the type of the initializer expression when treated as if it did not appear in an assignment context, and were thus a standalone expression (§15.2). The type of the local variable is the upward projection of T with respect to all synthetic type variables mentioned by T (§4.10.5).

#### It is a compile-time error if T is the null type.

Because the initializer is treated as if it did not appear in an assignment context, an error occurs if it is a lambda expression (§15.27) or a method reference expression (§15.13).

#### Example 14.4.1-1. Type of Local Variables Declared With var

The following code illustrates the typing of variables declared with var:

<pre>var a = 1; // a has type 'int'</pre>
<pre>var b = java.util.List.of(1, 2); // b has type 'List<integer>'</integer></pre>
<pre>var c = "x".getClass(); // c has type 'Class<? extends String>'</pre>
// (see JLS 15.12.2.6)
<pre>var d = new Object() {}; // d has the type of the anonymous class</pre>
<pre>var e = (CharSequence &amp; Comparable<string>) "x";</string></pre>
<pre>// e has type CharSequence &amp; Comparable<string></string></pre>
<pre>var f = () -&gt; "hello"; // Illegal: lambda not in an assignment context</pre>
<pre>var g = null; // Illegal: null type</pre>

Note that some variables declared with var cannot be declared with an explicit type, because the type of the variable is not denotable.

14

### **Java SE 12 to 14**

- Java SE 12 (2019): Compact number formatting, previews
- Java SE 13 (2019): Reimplemented Socket API, new FileSystems methods
- Java SE 14 (2020): Added switch expressions, more helpful NullPointerException output

https://www.oracle.com/java/technologies/javase/14-relnote-issues.html#NewFeature

CS 272 Software Development Professor Sophie Engle

## **Java SE 15 to 17**

- Java SE 15 (2020): Text blocks (finally!), hidden classes, CharSequence.isEmpty method, performance improvements to TreeMap compute/merge methods
- Java SE 16 (2021): Stream.toList method, record classes
- Java SE 17 (2021): Sealed classes, javadoc updates

https://docs.oracle.com/en/java/javase/17/language/java-language-changes.html

CS 272 Software Development Professor Sophie Engle

## **Switch Expressions**

```
int numLetters = 0;
Day day = Day.WEDNESDAY;
switch (day) {
  case MONDAY, FRIDAY, SUNDAY \rightarrow numLetters = 6;
  case TUESDAY
                         \rightarrow numLetters = 7;
  case THURSDAY, SATURDAY \rightarrow numLetters = 8;
  case WEDNESDAY
                          \rightarrow numLetters = 9;
  default \rightarrow throw new Exception("Invalid day: " + day);
};
System.out.println(numLetters);
```

https://docs.oracle.com/en/java/javase/17/language/switch-expressions.html

CS 272 Software Development Professor Sophie Engle

## **Text Blocks**

```
// ORIGINAL
String message = "'The time has come,' the Walrus said,\n" +
                 "'To talk of many things:\n" +
                 "Of shoes -- and ships -- and sealing-wax -- \n" +
                 "Of cabbages -- and kings -- n" +
                 "And why the sea is boiling hot -- n" +
                 "And whether pigs have wings.'\n";
```

https://docs.oracle.com/en/java/javase/15/text-blocks/index.html

CS 272 Software Development Professor Sophie Engle

## **Text Blocks**

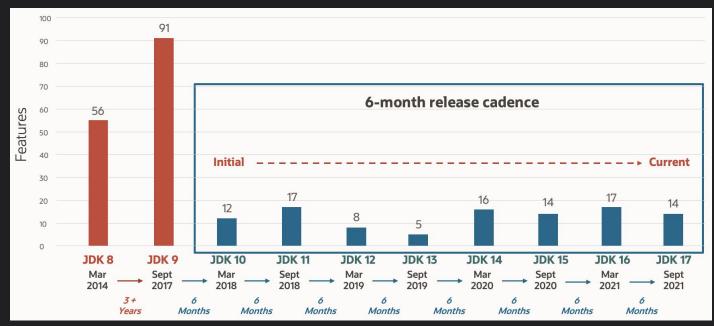

```
// BETTER
String message = """
    'The time has come,' the Walrus said,
    'To talk of many things:
    Of shoes -- and ships -- and sealing-wax --
    Of cabbages -- and kings --
    And why the sea is boiling hot --
    And whether pigs have wings.'
    """.,
```
